ABOUT ME

Throughout my childhood, I used to spend hours drawing pencil portraits. That would put me in a flow state that I consider one of the best pleasures one can experience. Years later I found out that I get the same flow when coding. I must admit, it is addictive.

Software development for me is not just a job, it offers me engaging challenges to continually learn and improve my skills. It's what I do for work as well as for leisure.

Below you'll find projects I've completed recently that showcase the skills I've acquired so far.

TECHNICAL SKILL SET

- HTML5
- CSS3
- JavaScript ES6
- REACT JS
- SASS
- GIT
- REDUX
- AJAX
- NODE JS
- SQL
- jQuery
- Express

MY EXPERIENCE

ASIL ECOMMERCE STORE

<https://asilecommerce.netlify.app/>

Fully functional full-stack eCommerce store. Built using React's functional components, hooks, and the Context API for state management. Started using SASS for more efficient and well-organized CSS code. Integrates Strapi for payment processing and Auth0 for user authentication. CommerceJs provides us with the back-end and database with which we interact via its API.

VIZZETO PIZZARIA WEBSITE

<https://gustavupp.github.io/vizzeto/index.html>

My first in a long time pure HTML5, CSS3, Javascript website. What has this project thought me: How easily Javascript can manipulate DOM elements and handle events, the CSS's flexbox, Grid, Media queries, and a mobile-first design approach.

POCKET BOOKSHELF WEB APP 2.0

<https://pocket-bookshelf.netlify.app/>

After first building this app with vanilla JavaScript I decided to rebuild it with react and give it a proper database. Pocket Bookshelf 2.0 uses Auth0 for user authentication, Node, Express, and MySQL on the backend, and React and Redux on the front end. This project is still alive and receiving updates and new features.

POCKET BOOKSHELF WEB APP 1.0

<https://gustavupp.github.io/book-lookUp/dist/index.html>

Version 1.0 of the React/MySQL/Node project above with HTML, CSS, and JavaScript only. This project relies heavily on Asynchronous Javascript AJAX, uses local storage to store the books interacts with two major APIs (Google Books and NY Times), is designed with ES6+ Modules and functional programming. (no libraries)

FORMAL EDUCATION

Bachelor of Translation And Interpreting
Certificate III In Information Technology

UNINOVE - Brazil | 2013 - 2016
UNINOVE - Brazil | 2009 - 2010
